

Your XE-21C 2x1 Component Video Switcher

Congratulations on purchasing your **XE-21C**, which is intended for presentation and home theater applications. Your **XE-21C** is a mechanical (passive) **2x1 Component Video Switcher** that switches one of two component video signals to a single output on RCA connectors. Alternatively, the **XE-21C** can be used to switch composite video with stereo audio (L, R) signals.

Connecting the XE-21C 2x1 Component Video Switcher

To setup your **XE-21C**, connect:

1. Up to two component video sources (for example, DVD players) to the input RCA connectors.
2. The output RCA connectors to an acceptor (for example, a display).

Note:

Use good quality connection cables to avoid interference, deterioration in signal quality due to poor matching, and elevated noise levels (often associated with low quality cables) and position your product away from moisture, excessive sunlight and dust.

Caution – No operator-serviceable parts inside unit.

For assistance, contact your dealer. Product Warranty is for one year.
